Collection 1

1) Employee Name List (ArrayList)

```
import java.util.ArrayList;
public class EmployeeList {
    public static void main (String[] args) {
        ArrayList<String> employees = new ArrayList<>();
        employees.add("Ramesh");
        employees.add("Suresh");
        employees.add("Priya");
        employees.add("Anu");
        employees.add("Karthik");
        System.out.println("Employees who attended
                               training:");
        for (String name : employees) {
            System.out.println(name);
        }
    }
}
```

OUTPUT:

Employees who attended training:
Ramesh
Suresh
Priya
Anu
Karthik

2) Restaurant Order Management (ArrayList)

```
import java.util.ArrayList;
public class RestaurantOrder {
    public static void main (String[] args) {
        ArrayList<String> order = new ArrayList<>();
        order.add("Dosa");
        order.add("Idli");
        order.add("Pongal");
        order.add("Coffee");
        order.add("Pongal");
        System.out.println("Updated Order List: "+order);
        System.out.println("Total number of items: "
            + order.size());
    }
}
```

OUTPUT: Updated Order List: [Dosa, Idli, Coffee]
Total number of items: 3

3) Online Course Enrollment (ArrayList)

```
import java.util.ArrayList;
public class CourseEnrollment {
    public static void main (String[] args) {
        ArrayList<String> students = new ArrayList<>();
        students.add("Ravi");
        students.add("Kavya");
        students.add("Arukh");
        students.add("Divya");
        students.add("Meena");

        String checkName = "Meena";
    }
}
```

```

if (students.contains(checkName)) {
    System.out.println("Enrolled");
} else {
    System.out.println("Not Enrolled");
}
}
}
}

```

Output: Enrolled

4) Unique Email Registration (Set)

```

import java.util.*;
public class EmailRegistration {
    public static void main (String [] args) {
        HashSet<String> emails = new HashSet<>();
        emails.add("a@gmail.com");
        emails.add("b@gmail.com");
        emails.add("c@gmail.com");
        emails.add("a@gmail.com");
        System.out.println("Unique Registered Emails: ");
        for (String email : emails) {
            System.out.println(email);
        }
        System.out.println("Total unique registered users: " + emails.size());
    }
}

```

OUTPUT: Unique Registered Emails:

b@gmail.com
c@gmail.com
a@gmail.com

Total unique registered users: 3

5) Library Book ID Tracking (Set)

```
import java.util.HashSet;
public class LibraryBookTracking {
    public static void main (String[] args) {
        HashSet<Integer> bookIds = new HashSet<>();
        int [] idsToAdd = {101, 102, 103, 101, 104};
        for (int id : idsToAdd) {
            boolean added = bookIds.add(id);
            if (!added) {
                System.out.println("Duplicate Book
                                   ID Found: " + id);
            }
        }
        System.out.println("Unique Book IDs:");
        for (int id : bookIds) {
            System.out.println(id);
        }
    }
}
```

OUTPUT: Duplicate Book ID Found: 101

Unique Book IDs:

101

102

103

104

EmployeeList.java

Share

Run

Output

```
1 import java.util.ArrayList;
2
3 public class EmployeeList {
